CHAPTER TABLE OF CONTENTS

WARNING !

Procedures to remove/replace items illustrated in this chapter require following biohazard, electrical hazard, and electrostatic discharge precautions.

Manual Contents	CD Main Screen	Index

CHAPTER OVERVIEW

This chapter provides:
- illustrations of parts of the LCx® Analyzer
- part numbers and descriptions
- cross-references to applicable Removal/ Replacement procedures (RRs) in Chapter 4

This chapter provides exploded isometric views of all field spared parts or FRUs (field replacement units) and their configurations. Each part is indexed to the item number and description on the Parts List (PL).

Each parts list consists of two items: a listing of parts by number, and a drawing showing how each part is attached in the analyzer.

Determining RR numbers
Numbers for the RR procedures are based upon the part list and item number assigned to each part.

Example: RR 2.5 is the Removal & Replacement procedure for the item on Parts List PL-2, line item 5.

RR 2.5

Parts List   Item Number
